File Management Commands

37. DOWNLOAD

Description

"DOWNLOAD" is a header of the file that is to be saved in the printer's memory.

The downloaded files can be divided to two categories: program file and data file (including text data file, PCX graphic files and bitmap font file)

The detailed descriptions regarding the download syntax for different files are shown below:

Maximum numbers of file saved in DRAM:
    256 files.
Maximum numbers of file saved in Flash memory:
    256 files

Printers will execute the program automatically when turning on power,   if one of the downloaded programs is named "AUTO.BAS".   To disable the auto execution function, please follow the procedures below.

Syntax

1. Download a program file

DOWNLOAD [n,]"FILENAME.BAS"

Parameter	Description
n	Specify the memory which is used to save the download files.
n is ignored	Download files to DRAM only. If you would like to save the files from DRAM to Flash memory before turning off power, you can issue MOVE command to printer to move the files from DRAM to Flash memory. F: Download files to main board flash memory.

FILENAME.BAS   The filename resident in printer memory.

Note:
  (1). The filename is case sensitive.
  (2). The extension of the program file must be ".BAS"
  (3). Filename format must be in 8.3 format.
  (4). If memory is not specified, all files will be downloaded to DRAM.
    No Battery is used to backup DRAM. The downloaded files in DRAM will be lost in case turns off printer power.

2. **Download a data file**

DOWNLOAD [n,]"FILENAME", DATA SIZE, DATA CONTENT…where

Parameter	Description
n	Specify the memory location to save the download files.
n is ignored	Download files to DRAM only. If you would like to save the files from DRAM to Flash memory before turning off power, you can issue MOVE command to printer to move the files from DRAM to Flash memory. F: Download files to main board flash memory.
FILENAME	The name of data file that will remain resident in the printer memory. It is case sensitive.
DATA SIZE	The actual size (numbers of byte) of the data file without header.

Note:

(1). For text data file, CR (carriage return) 0x0D and LF (Line Feed) 0x0A is the separator of data.

(2). If memory is not specified, all files will be downloaded to DRAM. No Battery is used to backup DRAM. The downloaded files in DRAM will be lost in case turns off printer power.

```

Note: When writing a download program, "DOWNLOAD" header must be placed in the beginning of file, and "EOP" must be placed at the end of program.
To run the program, you can call the main filename without BAS extension or use RUN command to start the download program.
Example:
1. Call the main filename
C:\>COPY CON LPT1<ENTER>
EXAMPLE<ENTER>
<CTRL><Z>
